

A point-of-sale system with all the options you need

Future
FUSION™

Our origins and our philosophy

Future POS is designed and enhanced by the team of developers at Cutting Edge Solutions. The objective of Cutting Edge Solutions is to make certain that Future POS users get the most powerful, robust, and user friendly software on the market. With over fifteen years of experience in the hospitality industry, Cutting Edge Solutions has worked relentlessly to guarantee that Future POS is the fastest, most reliable point of sale solution available.

Give Future POS a try today - we promise that you will not be disappointed!

You need it customized?

Start with a blank sheet of paper, then draw out how you want your screens designed. Future POS is that flexible! Notice each screen layout pictured here is different, because the order entry screen is totally flexible and configurable to your needs. Your menu screen can be programmed to generate the most efficient layout for your type of business, as well as reduce server training time. Screens can be created for different staff (bartenders, servers, managers), while buttons can be created in various sizes, colors, fonts, with logos, graphics bitmaps or plain text. Future POS software fits any restaurant application from fine dining, casual, pizza delivery, quick service, pool hall, cafeteria, and more. We strongly urge you to compare our ability to customize menus with the competition.

All of the bells and whistles are included

Your customers in the Hospitality Industry are demanding. You need tools to automate and safeguard your business that will involve minimal hassle. Future POS includes all the features you could want and more in a point of sale system AT NO ADDITIONAL COST! With the Future POS all inclusive software solution, you will never be nickel-and-dimed for additional features or functionality.

- Touch screen order entry and superior functionality
- Labor Scheduling and Employee Timekeeping
- Gift Certificates issuing and tracking
- Frequent Diner program with Reward Levels
- Ingredient Tracking with food costing
- Expo Mode tracks kitchen prep times
- Customer reservations
- Efficient dining room management
- Timed pool tables
- Three second credit card authorization via the internet
- House Charge Accounts for tracking customer sales or employee meals with personalized statements
- Customer Loyalty allows you to e-mail numerous customers at once to alert them about specials, events, etc.
- Interfaces with Microsoft MapPoint® for delivery directions

- Interfaces with general ledger accounting programs such as Great Plains, Peachtree, MAS90, MenuLink and QuickBooks Pro
- Interfaces with popular inventory control programs such as ChefTec, MenuLink, and Food-Trak
- Ability to pre-authorize bar tabs
- Bartender drink recipes
- Drivers license verification of age (most states)
- Built-in register Help Screen
- Beer and Wine Club
- Ability to split checks by seat
- Kitchen orders by course
- Hold and Fire Items
- Triple/Quadruple High Print

Great features at your fingertips

Dashboards

Dashboards are located in the Future POS Back Office and can display dynamically driven information based on your needs. Future POS 5.0 Dashboards consist of customizable charts and graphs that can be manipulated according to your needs in terms of size, placement, refresh rate, and content. The benefit of Future POS Dashboards is that you can view the data most important to the daily operation of your business in real time from one screen on your Future POS Server. Dashboards also have security options that will allow you to determine which employees are allowed to see particular Dashboards. Our Dashboards will give you information the quick and easy way without wasting your time running reports and digging through useless data.

Reservations

Reservations can be taken from any terminal, including the Back Office PC, for any date you select. Simply follow the prompts (date, time, customer, requirements, number in party, etc.) and the reservation is complete! The table grid will show the tables as Reserved, so other servers cannot use that table. The reservation screen also has a column for notes such as Highchair, VIP, or Birthday.

Pizza & Delivery

Future POS does pizza! Our integration with Rochelle Caller ID modules display customer information at the push of a button. Once the order is entered and printed, pizza labels that display the customer name, items, date and time can easily be generated to place on the boxes. Orders are transferred to drivers, making the drivers responsible for the orders. Microsoft MapPoint® can generate maps to the delivery sites saving time and money! Customer history is tracked for reporting and marketing purposes to target those customers that have not purchased in 30 days, 60 days, etc.

Labor Scheduling

The advanced Labor Scheduling feature allows management to schedule staff for multiple jobs by pay period. You can schedule an employee's shift, enter their vacations, and record days off. Graphical colored bars show when employees are not available for shifts. Schedules can be printed in the office and posted by job code, making it very easy to see everyone's shifts. Employees can also print their own schedule from any POS terminal to the local receipt printer. Hours and gross pay are accumulated so management can forecast what the labor cost will be for that scheduled period.

Recipe Maintenance

Future POS includes a reference database of popular recipes that you can customize. Just touch a button and scroll down through the alphabetized list of recipes. To save time, the recipe can be automatically rung from that screen or that recipe can be printed on the receipt printer and given to the customer. A bar or restaurant manager can easily modify the recipe files so a bar book is no longer required.

Multi-Column Modifiers

Reduce ordering time with our fast, simple, and customizable multi-column modifiers. Every option for an item can be found in one modifier window. No need to click from screen to screen or search for buttons on different menus!

Reports that keep you “up to date”

No system is complete without checks and balances. Future POS has built in reporting for all of your needs: labor, item costing, daily sales, promotional items, beverage controls, and more. Data can be stored for 9,999 days, which is nearly 28 years worth of history! Reports can be printed, exported to Microsoft Excel™, saved as a .PDF file, or viewed on the display. Reports can also be scheduled to run automatically at a pre-specified time of day. Data is stored by date and time, so whether you are looking for a daily, weekly, monthly, quarterly, or annual report, the data is there!

Microsoft SQL Database

The latest edition of Future POS, Future Fusion, now runs on a Microsoft SQL™ database! Previously you had to decide between using a product that had lots of features but ran on a proprietary database, or a product that uses Microsoft SQL™ but has limited functionality. With the release of Future Fusion, restaurateurs and developers will finally have the best of both worlds. One of the goals of Future Fusion was to take Future POS to the next level by combining all of the functionality of Future POS with a fast and reliable database in order to give users complete access to their data. Microsoft SQL™ is the industry standard therefore integration to third party applications is easier than ever! Future Fusion still has all of the great features and reliability that you came to expect from previous versions of Future POS, plus that ability to really make the software work for you thanks to Microsoft SQL™.

Enterprise

Future POS offers you the power to control multiple business locations from a single site with our Enterprise software. Future POS Enterprise gives you the capability to analyze and share resources for various businesses from a central location. Stores using Enterprise can share customer information, gift certificates, sale information, items, buttons, menus, and more. Enterprise also provides centralized reporting, updating, and administration.

Innovative Options

Future POS & Handhelds

Wireless table side ordering is available with Future POS Handhelds. Some estimates have shown that servers spend 10% of their time walking to POS terminals and waiting in line. Credit card transactions can be authorized with a snap-on swipe, and authorization slips can be printed on a wireless “belt” printer. This will help keep staff table side, engaging customers, selling additional items instead of spending time walking back to a POS terminal.

Online Ordering

We offer your restaurant customers the ability to order from their home or office computer. We can professionally design your web site with your menu to allow customers to place and pay for orders online. The orders are then securely registered in your store’s POS System and sent to your kitchen printer to be packaged for deliver, take out, or curbside pickup. Increase “To Go” sales and decrease the labor it currently takes to manually handle your phone-in or faxed orders.

Favorites

Favorites are a new feature in Future Fusion that give users access to external and internal links that are used frequently. Employees can access just the information they need on one screen without searching through different menus in Future Fusion. Each employee in your business can have their own Favorites page in order to save everyone time and make your staff more efficient. Favorites also have built in security features so that your staff can only see what they are allowed to see.

Fingerprint Identification

Fingerprint Identification provides a lock-tight security measure for signing on to a terminal, clocking in and out, performing voids, etc. This completely eliminates “buddy punching”, and will also make sure only managers have access to manager functions.

Surveillance

Protect your business from fraud and theft by using Future POS’s built in Surveillance Module and ordinary web cameras. Future POS can monitor your business with event-driven video and real time surveillance plus write a log file of all video activity for your records.

Magnetic Gift Cards

Future POS has incorporated the tracking of Gift Cards, Reward Cards, House Charge Cards and VIP Cards as part of the package. Gift Cards printed with your company logo are sold and tracked within Future POS. You can also track gift cards that are given away free as a reward for your frequent diner program, as a donation for charity, or as a marketing promotion. All gift cards and certificates sold, destroyed, or redeemed are stored in the gift certificate file for historical reference. Card balances can be checked from any POS terminal. If a customer loses their card you can destroy the original and issue a new card!

All You Could Ever Want

- **Credit Card On-File** securely retains the customer's credit card account information in the customer database allowing for repeat customers to charge delivery orders by phone.
- **Pre-Authorized Bar Tabs** captures necessary credit card information and puts the cardholder's name on the tab so the bartender does not need to hold credit cards.
- **A Check Description** can be entered by a bartender, such as customer's name, when running tabs.
- **Training Videos** can be shown on the terminals.
- **Timed Item** capability for tracking pool table rental, dart rental, internet PC rental or any other timed entertainment.
- **Coursing** with multiple print formats to remote kitchen printers allows chefs to see a complete order by course and seat number.
- **Ingredient Tracking** with Recipe Building and Food Cost by Item automatically subtracts from inventory as items are sold, complete with reorder and reconciliation reports.
- **Expediter Mode** allows any touch screen to be used as an expediter terminal in the kitchen, and also to provide reports with kitchen prep times.
- **Hold and Fire** items allows you to take large catering orders or takeout order hours, days, or even weeks in advance, and have the items print to the kitchen at the appropriate time.
- **Split a Single Item** such as shared appetizers or bottle of wine at one table equally on separate checks.
- **Item Recipe Lookup** lets wait staff look up an item's ingredients to provide nutritional information to the customer or inform the customer about foods that could cause allergic reactions.
- **Item Countdown** allows wait staff to see the quantity of each item on hand.
- **Customer Lookup** includes year-to-date purchases and displays the last order allowing you to repeat or modify the last order.
- **House Accounts** with personalized customer statements is an accounts receivable module with the ability to maintain customer charges or employee meals.
- **Guest Check Headings** can use a standard bitmap graphic so your restaurant's logo can be printed on the guest's check.
- **Automatic Printer Redundancy** reroutes the printing in the event of a printer failure.
- **Automatic Data Backup** can backup sales data from the file server to one or all of the POS terminals to prevent possible data loss.
- **Internet Credit Card Redundancy** is a hardware option that detects a loss of internet connection and automatically dials out over a phone line as back up.
- **External Device Interfaces** for caller ID, scales, scanners, customer displays, coin dispensers, liquor dispensing system, drive-thru menu board, and hotel property management systems.
- **Online Help Screens** are built in to assist you.
